

Shoezone - Dover

Electrical

Key Information

- Founded in 1917 Shoe Zone which sells shoes at low prices
- Over 500 stores nationwide
- Annual Turnover £241 Million

Key Facts

- Client Name: Shoezone
- Project Name: Dover
- Services: Electrical Installation
- Start Date: 16.04.18
- Completion: 11.05.18

Testimonial

We already had a long working relationship with John Worth Electrical prior to the Dover project but this was a completely new concept for us. We had an idea of how we wanted our new concept store to look and we knew that John Worth Electrical would be the company to help us deliver the look on time and within budget. They have the knowledge, experience and contacts to be able to show us what was available and gave us an honest opinion, whilst maintaining the balance between price and quality. With this being a completely new concept, every detail needed to be thought of prior to going on site and they didn't let us down. Every detail down to the containment used was given full consideration by them. With the dedication of their entire team from Management to the people installing, we were able to create the store that matched our original brief perfectly.

Jamie Footitt
Shop Fitting Manager
Shoe Zone

Background

Our strong relationship with Shoe Zone has developed over a period of more than fifteen years and continues to grow, our electrical team work across multiple divisions of the business. The nature of Shoe Zones projects requires high levels of professionalism and workmanship, from the initial designs and quotations, right through to completion and project handover.

Throughout our relationship with Shoe Zone, we have successfully completed a range of activities such as the installation of distribution systems, control wiring, cable and containment sizing and lighting designs using our in-house team and experienced engineers. In addition, all our fire alarm and emergency lighting systems are designed, installed, and commissioned by our team of dedicated in-house engineers and out-source technical team.

Our consistently high standards, industry expertise and sheer enthusiasm have put us in a particularly strong position.

Project Overview

Dover was a new concept store for Shoe Zone sited on a retail park rather than a high street.

Our electrical team were involved from the start working closely with Shoe Zone property managers and utilising our experience from providing lighting designs and samples to ensuring Electrical load calculations were correct for DNO supply and meter installation.

Working from the power source, we were able to provide the full electrical installation including Fire alarm, Data cabling and Emergency lighting which was designed and installed to relevant regulations.

As with all new concepts there were some challenges and alterations the positioning of containment for example had to be adapted and with their wiring expertise, our team were able to find a solution on site.

We regularly work in changing environments where installations may be undertaken. Each scenario brings a different set of challenges and requirements that we must meet. Health and safety is a priority at all times.

Scope of Works

During the process of the fit out our electrical team installed and commissioned

- Switch fuse and meter tails
- Schneider distribution boards and expansion boxes
- Containment, lighting trunking and basket tray
- SWA HVAC supplies
- CAT5 cabling to tills and traffic flow counters
- Contactor control systems for lighting and signage
- Small power circuits
- Heating system with timer controls
- Fire alarm system including shutdown for HVAC door access and music system
- Emergency lighting system
- Paxton door access system
- Tested and commissioned all aspects and issued appropriate NICEIC certification
