

# Jewellery Quarter, Birmingham

Joinery

## Key Client Information & Project Facts

- Jewellery Quarter location, Birmingham
- Full Project Service Required
- Start Date: 07.01.2019
- Completion: 21.02.2019
- Long and successful client relationship
- Client has over 40 years' Bespoke Joinery Experience

## Testimonial

*The John Worth Group have since worked with us on numerous retail and commercial projects and we are very happy to keep coming back to them for our Joinery manufacturing needs.*

*They are able to take our sketch ideas, concept drawings and designs and deliver functional, good quality pieces of furniture that meet the brief and come in on budget.*

*They're also very pleasant to work with and responsive to our needs - From suggesting alternative methods that can reduce costs, sampling materials and finishes or offering advice on more robust finishes - they take it upon themselves to find the answers and workable solutions.*

Kate Rowe

## Project Overview

In Early 2019 our client required full Project Management and manufacture support in taking their superb concept design of Jewellery unitary and furniture and bringing it to life.

## Scope of Project Works required

- Project Management
- Design & Development
- 3D Visual supply for sign-off
- Manufacturing Drawings
- Sample supply for Approval
- Procurement of all materials which included Metalwork, Glass & LED Lighting
- Completion of manufacture for specific delivery deadlines
- Quality Control
- Packing, wrapping and palletising suitably for delivery
- Logistics and kerb-side dedicated delivery

## Our Approach

Our dedicated Project Manager worked closely with the client throughout the build design process, eventually supplying 3D visuals and material / finish samples for sign-off.

Once sign-off had been achieved our drawing team supplied manufacturing packs for our factory to proceed in the construction of the unitary required.

Firstly however, the procurement of all materials specified by the client was established along with the management of 3<sup>rd</sup> Party suppliers such as metalworkers, glazers and our very own electrical contracting team.

The first step for the manufacture was to process through our machining department on one of our modern CNC machines and then through to secondary machining and edge banding where required with a mid process Quality control undertaken by both our PM and Production Manager.

Next stage of the process was into the assembly workshop where our PM and Production Manager dedicated a team of Bench Joiners to assemble the machined parts compiled along with our detailed manufacturing drawing packs. During this process both the PM and Production Manager oversaw the construction of each piece of furniture and brainstormed, along with the Joiner, any issues that may have arisen or finer points that needed addressing.

Some of the Furniture required final finishing in our on-site spray shop, where our highly skilled sprayer matched the signed-off, controlled samples agreed earlier in the process.

Once each piece of furniture was complete, both the PM and the Production Manager, along with the Joiner & Sprayer conducted a quality control survey and highlighted any issues the needing addressing prior to final sign-off and delivery.

All unitary was wrapped to a high standard and delivered via a dedicated vehicle on suitable pallets.
